

Wyss Center boilerplate

Short version

The Wyss Center for Bio and Neuroengineering is an independent, not-for-profit neuro venture builder with strong translational R&D roots, committed to transforming the treatment of neurological and mental health disorders. Based at Campus Biotech in Geneva, the Center drives innovation at the intersection of artificial intelligence, bioengineering, and neuroengineering to restore neural functions and deliver precision therapies. Established in 2014 with the support of Swiss entrepreneur and philanthropist Hansjörg Wyss, the Center collaborates with ventures, academic institutions, industry partners and investors to push the boundaries of neurotechnology.

About the Wyss Center

The Wyss Center for Bio and Neuroengineering is an independent, not-for-profit neuro venture builder with strong translational R&D roots, committed to transforming the treatment of neurological and mental health disorders. Based at Campus Biotech in Geneva, the Center drives innovation at the intersection of artificial intelligence, bioengineering, and neuroengineering to restore neural functions and deliver precision therapies.

Founded in 2014 with the support of Swiss entrepreneur and philanthropist Hansjörg Wyss, the Wyss Center pioneers a unique model that blends translational R&D with patient-centric therapies, enabling both market and clinical impact. By bridging the gap between scientific discovery and real-world application, the Center de-risks emerging neurotechnologies and accelerates their path to clinical and commercial viability. Through close collaboration with ventures, academic institutions, industry partners, and access to investor networks, the Wyss Center fosters the development of impactful solutions that improve lives.
